

**HIRSCH** Czech Republic

PRODUCTION OF WOODEN SPACERS AND INSERTS

## ABOUT US

The company **HIRSCH Czech Republic s.r.o.** was established in January 2023 through the merger of Novopol s.r.o. and Morapal s.r.o.

Novopol s.r.o., based in Velký Třebešov near Česká Skalice, had a long history as a manufacturer of expanded polystyrene and corrugated cardboard packaging, dating back to 1992.

Similarly, Morapal s.r.o., founded in the same year under the name Morávek a Král s.r.o., that was connected into the HIRSCH Gruppe in 2021, is involved in the production of wooden products as well as products made from expanded polystyrene. polystyrenu.

## ABOUT US

In the Czech Republic, there are four manufacturing plants where we process and produce expanded polystyrene (EPS) products, products made from moulded pulp (MP), wooden products, and our own recycled EPS material (known as rEPS).

### **Production plant Velký Třebešov**

- The production of EPS packaging
- UFH (underfloor heating)
- Wire Cutting EPS

### **Production plant Česká Skalice**

- The production of EPS (insulation)
- The production of MP (moulded pulp)
- The production of rEPS (recycled EPS)

### **Production plant Uničov**

- The production of wooden spacers and inserts.
- The production of EPS packaging

### **Production plant Červenka**

- The production of wooden spacers and inserts.
- The production of Briquettes

## ABOUT US

Within the packaging material industry, we currently process three types of wood: spruce, pine, and larch. We manufacture various lengths and widths of reinforcements, as well as a wide range of wooden inserts.

The final products are delivered (as per customer requirements) with labeling confirming the treatment of the timber through drying. This ensures the elimination of possible pests in the wood. In addition to certificates confirming the degree of timber treatment from suppliers, our company possesses its own timber drying facility with a capacity of 80 m<sup>3</sup>.

Our advantage lies in flexibility and the ability to produce both through machinery and manual work for special projects.

Some of our most significant customers include Miele, Siemens, Mora, and others.

## WOODEN SPACERS AND INSERTS

Our advantage lies in flexibility and the ability to produce both through machinery and manual work for special projects.

Example of the wooden spacer for the customer Miele including the labeling confirming the treatment of the timber through drying.

Example of the wooden palette for the customer Siemens, in this case it is about the manual work for this concrete customer.

## WOODEN BRIQUETTES

The most recent product is the production of wooden briquettes from our own waste materials.

We use cutting-edge technology from the German manufacturer RUF for this production.
